ADVISORY SUMMARY

- **Effective Date: January 1, 2020**
- **This advisory letter sets out the expectations for Indiana licensed residential care facilities for preventing the transmission of *Mycobacterium tuberculosis*.**
- **To become exempt from the rules at 410 IAC 16.2-5-1.4(f)(1)(2)(3)(4), a facility must adopt and implement a nationally recognized standard for the control and prevention of tuberculosis.**

Background: The residential care facility rules have long held prescriptive requirements related to testing and screening for tuberculosis. These prescriptive rules have not remained current as guidance has changed over time related to the prevention of tuberculosis.

Analysis: The guidance for the prevention and transmission of tuberculosis has changed significantly over time to the extent that the prescriptive guidance is out of sync with current guidance. Additionally, the prescriptive nature of the rules does not provide facilities the latitude to adjust infection control practices to meet the situational status of the facility. It is the intent of this advisory letter to remove regulatory barriers and provide facilities the ability to adjust infection control procedures and processes to meet the level of intervention needed based on the facility's risk.

Policy: To allow facilities to maintain control and prevention of tuberculosis in the least restrictive and most cost effective manner, the ISDH is issuing a blanket waiver exempting facilities from current regulatory requirements and instituting an alternative method to achieve

the intended outcome of 410 IAC 16.2-5-1.4(f)(1)(2)(3)(4). To be exempt from 410 IAC 16.2-5-1.4(f)(1)(2)(3)(4), the facility must formally adopt a nationally recognized standard and implement and follow the standard as written. Should a facility fail to meet the exemption requirement, a deficient practice citation will be written.

The nationally recognized program for employees is found at:
